

Lab: Implementing .gitignore to Ignore Unwanted Files and Folders

Objective

- Explain Git Ignore.
- Learn how to ignore unwanted files and folders using .gitignore.

1) Open Git Bash, Navigate to repository

Commands

```
$ cd D:/CTS
```

2) Creating a .log File

```
$ touch sample.log  
$ mkdir log  
$ touch log/error.txt
```

3) Create/Open the .gitignore File

```
$ .gitignore
```

4) Verifying the Status of the Repository

```
$ git status
```

5) Add the .gitignore File

```
$ git add .gitignore
```

6) Commit Changes

```
$ git commit -m "Added .gitignore file"
```
